

Map-In-A-Box™ is an add-on to MapInfo Professional™ 6.0 (or higher) that seamlessly integrates MapPoint® 2002 functionality into MapInfo Professional™.

## Features:

- **Street level maps and geocoding (where available)**

Street-level data available within MapPoint® can be viewed directly within MapInfo Professional™. The current map view is automatically refreshed with the street level data every time the map view is altered by panning around or zooming in and out of the map.

Multiple windows of different raster styles can be displayed.

Overlay your MapInfo data on top of the street-level data.

- **Drive time analysis**

Create up to 3 drive time regions and use the results within MapInfo for catchment area analysis.

- **Address lookup**

Type in a street address or place name and locate it on the map.

- **Reverse geocoding 'info tool'**

Click on the map to identify street address and other places of interest.

## Available for:

- **North America**

USA, Canada and Mexico.

- **Europe**

Austria, Belgium, Denmark, France, Germany, Italy, Luxembourg, Netherlands, Spain, Switzerland and United Kingdom.
